

# Patch Windows 2003 Terminal Server to allow more than 2 concurrent sessions

As you might know Windows 2003 Server accepts at most 2 concurrent Terminal Server sessions (and 1 console session) in Remote Administration mode (which is the default). Of course if you switch to Application Mode you can have an unlimited number of sessions but this requires licenses and a license server.

When Terminal Server creates a new session it checks if the new session is either a console session or a help assistant session and if not it allocates a license. The function that performs this check is called CRAPolicy::Logon

If you are going to replace termsrv.dll please note that it's protected by Windows File Protection so you need to replace it in the following order:

- Replace termsrv.dll in c:\windows\system32\dllcache
- If you have the installation cd/dvd (i386) folder copied to your harddrive replace (use the compress command) or remove it there as well
- Now rename the original file in your system32 folder and place the patched version
- Reboot

VPatch file: [Windows Server 2003 VPatch file \(2003tspatch.zip\)](#) (of termsrv.dll build 5.2.3790.3959 English language)

## How to use the pat file:

1. install v-patch: [vpatch32.zip](#)
2. from the vpatch directory launch vpatchprompt.exe
3. vpatchprompt will ask you for the following files:
  - Patch file (the .pat file).
  - Source file (termsrv.dll).
  - Destination file (the patched [termsrv.dll](#)).
4. now replace termsrv.dll as instructed in the post & reboot
